

**Thank you for purchasing the Dead Forest Pack!**

**There are 35 models that you can piece together to create realistic looking trees and save them as prefabs. If you're not in the mood of making your own trees you can find some pre-made ones in the Prefabs folder.**

**There is also a burning shader included in the pack. It was created using the Amplify Shader Pack and you'll need it if you want to edit the nodes.**

**The Burning shader works with the Camera path set on Forward.**

**The textures are 4096x4096 and if you are running on an older PC make sure you compress them to the resolution you need.**
